

Procedure for obtaining

Garmin MapSource® software

Revised 6 September 2011

It may be possible for you to obtain MapSource free, but you need to first install Garmin Training Center Legacy Version, which acts like a primitive version of MapSource. After installing Garmin Training Center Legacy Version, MapSource_Update will 'see' that you have a valid copy of MapSource and will then install the latest version of MapSource. I hope that makes sense.

So, here is the procedure:

1. Download the [Garmin Training Center Legacy Version](#) for free.
2. Install Garmin Training Center Legacy Version. There is no need to run Training Center after it has been successfully installed. In fact you should exit the setup wizard when it asks you to connect you GPS, etc.
3. Download [Garmin MapSource Update](#) (not topo basemap patch).
4. Install Garmin MapSource Update.

Successful result will be free Garmin MapSource with basic world map (major roads, political boundaries, and waterways).

Refer to the [MapSource User Manual](#) where you may find pages 9 through 11 particularly useful.

Let me know of your success,
- Doug Adomatis
