

New Auto-Routing Topo Map of New Zealand

NZTopoVer53

This map is huge at 600mb – which means that it may be slow at refreshing – depending upon your model GPS.

I suggest that you set the map detail to normal and turn declutter on.

The street searching in advanced indexing with the state/region search being the appropriate Territorial Local Authority – eg Thames-Coromandel District or Manukau City etc – only really necessary when using a Garmin GPS that insists on selecting a State before searching eg Nuvi, c320 etc

When Auto-Routing – check the route – this is still the Sept beta version and it may send you somewhere you don't want to go – particularly don't auto-route long distances in the South Island – check that the GPS isn't sending you to the West Coast when you don't want to go there.

Please advise any glitches or changes you would like to see in the new update.

NZ Topo Ver53

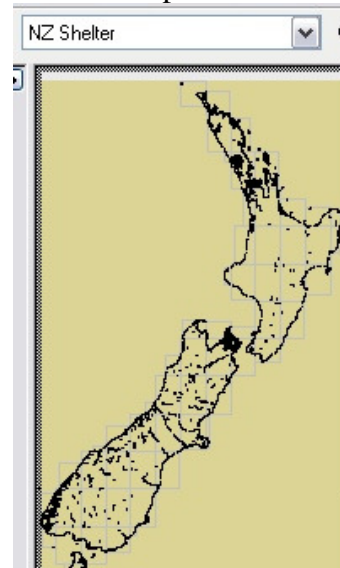

Now 4 maps and auto-routing

NZA4beta – Auto-Routing Base maps – select all 19maps (38mb) first – has advanced indexing for use in Zumo and Nuvi GPS's - auto-routing

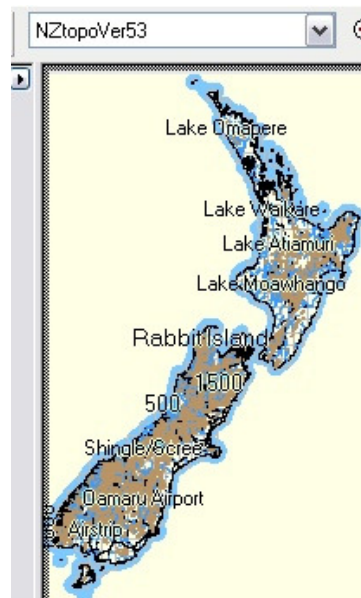

Still in development – check proposed route in Sth Island to make sure you aren't going via the West Coast – I suggest routing short distances

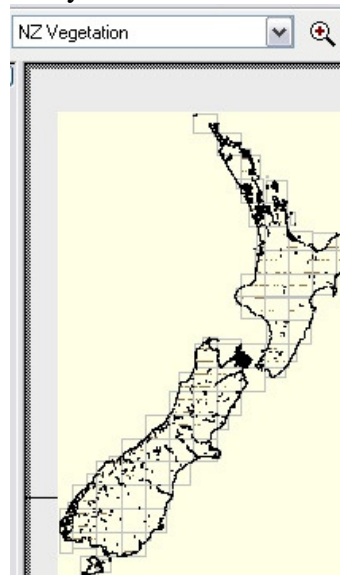

NZ Shelter – fence lines, shelterbelts and tree points - 64maps (52mb) select areas you might like to see – personally I think it clutters the screen – however some hunters use fence lines etc for reference points.

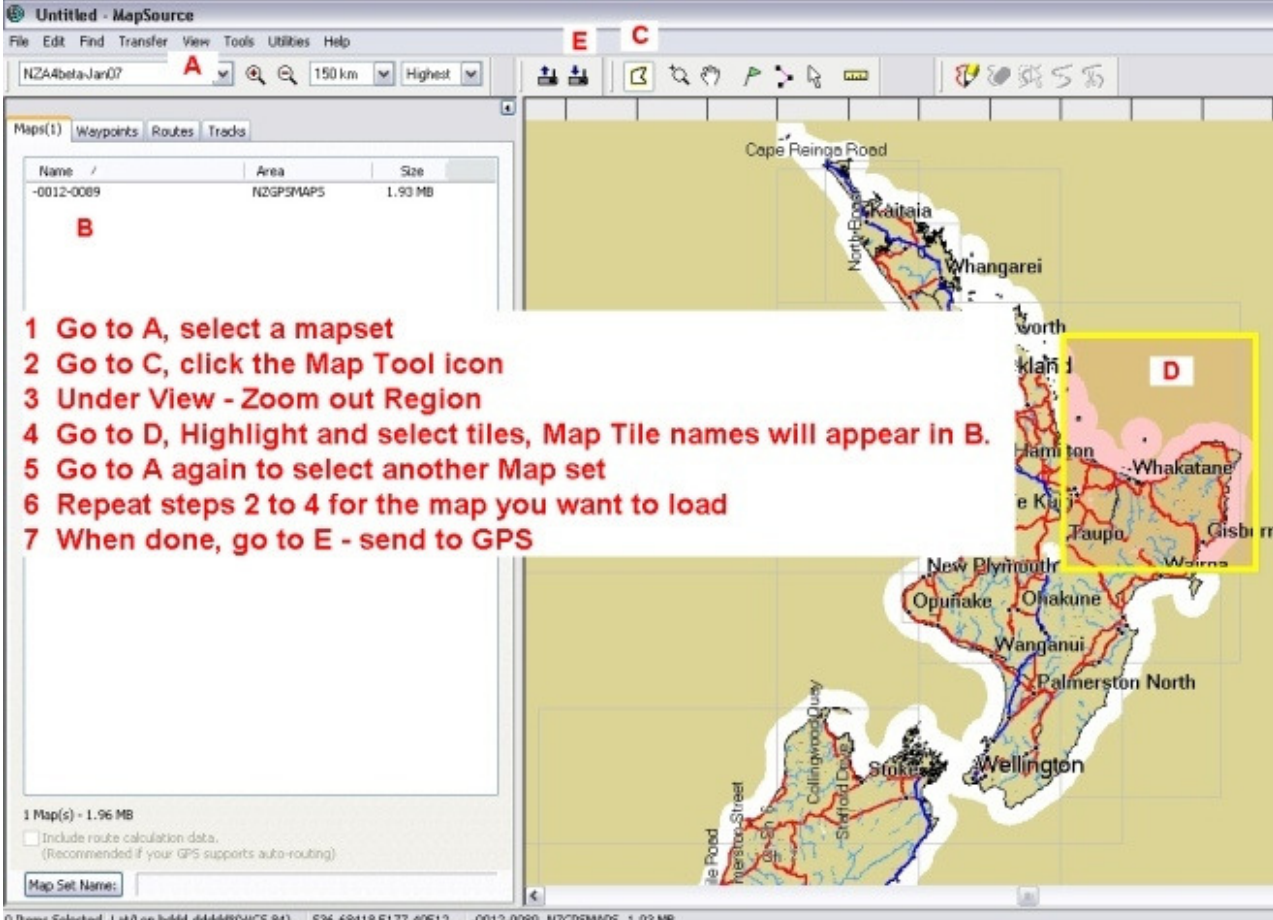

NZtopo – 291maps (450mb) all those topo lines, streams, tracks and an extra 100mb of ground cover

NZ Vegetation – 87maps (43mb) additional Native Bush and scrub – personally – I think it detracts – however load it to your GPS and view – you may like it

How to load maps

The screenshot shows the MapSource application window. The title bar reads "Untitled - MapSource". The menu bar includes "File", "Edit", "Find", "Transfer", "View", "Tools", "Utilities", and "Help". The toolbar contains various icons for map navigation and editing. The main map area displays a map of New Zealand with a yellow box highlighting a region in the North Island. The left pane shows a list of maps with columns for "Name", "Area", and "Size". The status bar at the bottom displays coordinates and map information.

Name	Area	Size
-0012-0089	NZGPSMAPS	1.93 MB

1 Go to A, select a mapset
2 Go to C, click the Map Tool icon
3 Under View - Zoom out Region
4 Go to D, Highlight and select tiles, Map Tile names will appear in B.
5 Go to A again to select another Map set
6 Repeat steps 2 to 4 for the map you want to load
7 When done, go to E - send to GPS
